NET SCORE +1 / ±6 → NEUTRAL / SELECTIVE — pick spots

in this band 3 sessions · signals flip on published thresholds only — see method line on each row

WHAT THE TAPE FAVORS TODAY

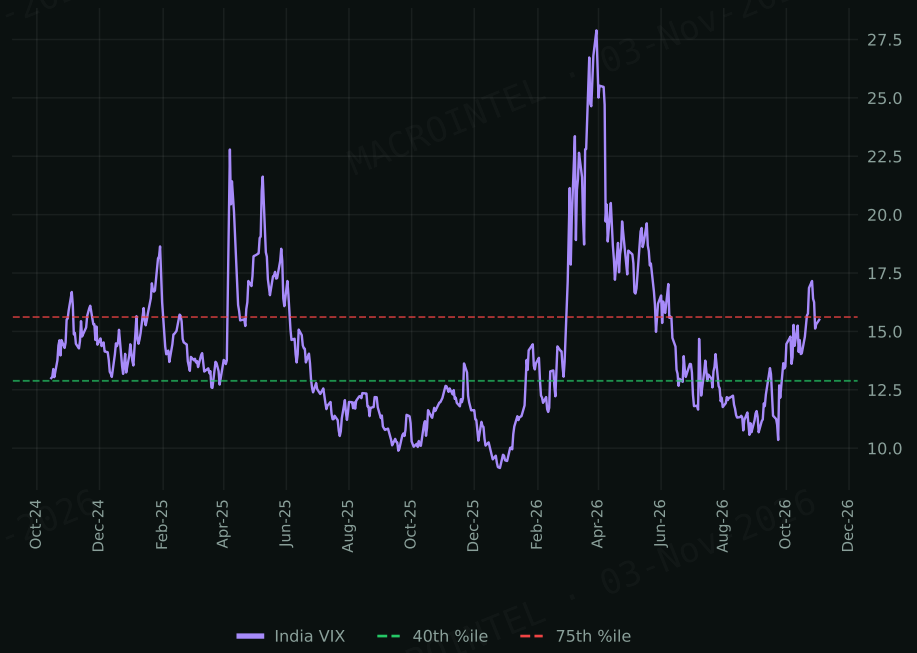

- INR steady/firm (94.73, 21d -1.7%) → FII-sensitive names breathe; rate-sensitives work.

Rules, not opinions: every bullet above is generated by a threshold on the numbers shown. The terminal's HMM/Goldilocks engine remains the structural view; this page is the price-implied cross-check.

- Gilt LT ETF (px) 5d move z +2.3 (+1.03%)

India daily G-sec curve has no free feed (FBIL/CCIL licensed) — levels above are RBI/FBIL anchors carried by the terminal's auto-scrape; direction is tracked daily via gilt-ETF prices. US complex is full daily history from FRED. MIBOR is unsecured (call money) vs the secured repo — its spread to repo is itself a liquidity signal, unlike SOFR−EFFR.

RBI Policy Corridor · where overnight money sits

MIBOR-OIS Curve · the priced RBI path

Policy Priced In by Tenor · OIS minus Repo (bp)

Front-End Read · rules on the anchors

MIBOR–Repo: +0bp → BALANCED — MIBOR hugging the repo rate

(unsecured vs secured — sign flips vs SOFR–EFFR)

1Y OIS − Repo: +115bp → ≈4.6 hikes priced over 1y

OIS 1s5s: +18bp → easing cycle then normalization priced

Levels are RBI/FBIL anchors via the terminal

(or ois_manual.json). Liquid tenors: 1Y & 5Y.

OIS beyond 5Y is thin — G-sec is the long-end read.

CURVE REGIME · NOMINAL 2S10S ONLY · US DAILY, INDIA FROM THE RBI-HOME DATED STOCK

layer	pair	lvl bp	20d Δbp	regime	strength	note
IN · Nominal	5Y vs LT (ETF)	·	-0	Bear Flattener · d1	1/10	PROXY — gilt-ETF prices

Bull/Bear = direction of yields · Steepener/Flattener = direction of the spread · strength = |z| of the 20d spread move vs its own 3y distribution, capped at 10 · dN = days in state

Reading the three layers (US, daily):

Nominal moves = growth + inflation + term premium, undifferentiated.

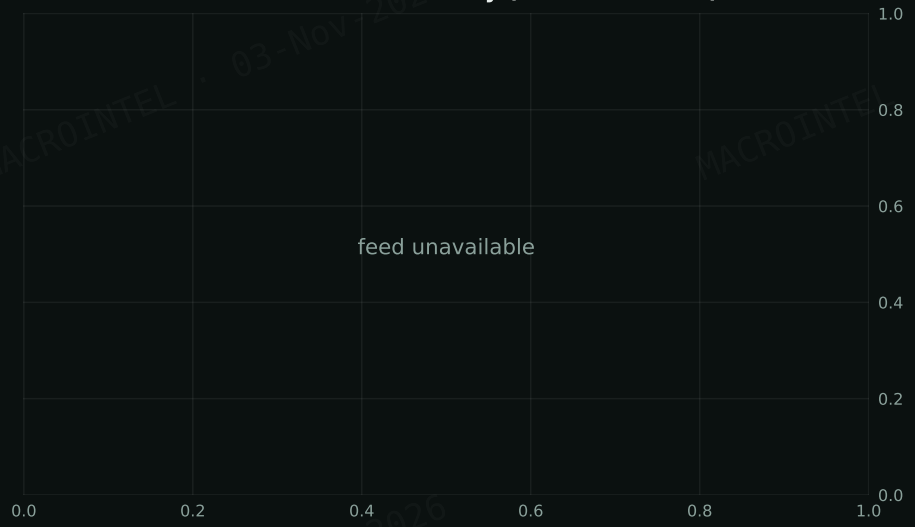

Breakeven layer isolates the inflation-expectations component.

Real (TIPS) layer is the growth/policy-stance residual — the one equities actually discount.

India, without self-deception:

No INR inflation swaps trade; the 2013 linkers were bought back in Feb-2016 — so no daily inflation or real curve exists. Nominal direction comes from gilt-ETF prices (5Y vs long-duration, classified from price-implied yield moves). The forward-looking policy row is the MIBOR-OIS curve (anchors); the real row is 10Y minus trailing CPI. Blue rows = proxy/anchor. When a row is a proxy, treat the REGIME as informative and the strength score as absent — we do not synthesize confidence we don't have.
